

ILLUMINATOR

The illuminator throws indirect light upward to envelop any space with a soft glow. This fixture utilizes a tunable white LED module that is programmed to correlate color temperature and brightness. This allows the architectural-grade LED to produce the most human-centric light output possible. To further the human connection, the light output is controlled with a physical dimming knob.

SPECS

Light Output 1800K @ 0.1% – 4000K @ 100%
